- 1. Select, create, and interpret an appropriate graphical representation (e.g., scatterplot, table, stem-and-leaf plots, circle graph, line graph, and bar plot) for a set of data.
- 2. Use appropriate statistics (e.g., mean, median, range, and mode) to communicate information about graphically represented data. Use these notions to compare different sets of data.
- 3. Describe and explain how the relative sizes of a sample and the population affect the validity of predictions from a set of data.
- 4. Approximate a line of best fit (trend line) given a set of data (e.g., scatterplot). Use technology when appropriate.

Graphing and Statistics Challenger

Activity Edit Link Results Planner

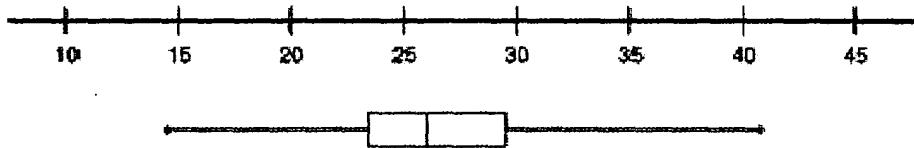

Area Understandings In order for students to master statistics and apply graphing skills well, students need to be asked to apply these skills in many different contexts. Thus we strongly encourage that you use ABC. This activity predominantly uses oral and visual learning styles.

Learning Styles

Extensions If student easily completes this activity, assign our "Advanced Graphing and Statistics Challenger" activity.

Launch Program Click here to begin activity.

Sample Question The box and whisker graph shown below represents the results of a survey of the estimated gas mileage of 100 car models.

Which statistics — mean, median, mode, range — can be determined from this graph?

A. mean only
B. median only
C. range and mean
D. range and median

✓ D. range and median

Summary	Students conduct a month-long research project whereby they analyze data on a mouse population over 15 years. They submit a written report in which they propose and defend at least one theory pertaining to the mouse population data.
Materials	graph paper, ruler, and student handout material.
Duration	1 period per week for four weeks.
References	Biology -Lab Projects. Investigation 30-1, pg. 117, "Lab Worksheets" manual.

Summary	Students are given a table of scientific data and asked to graph, using graph paper and/or computer spread sheet programs. Students use relevant math skills to create multiple graphs that effectively present and analyze the data given them. Using their graphs, students write their predictions and conclusions.
Materials	Data tables
Duration	1-2 periods
Broad Understandings	Students understand how to apply appropriate statistics skills to analysis of scientific data.

Summary	In class discussion, students will be able to explain the relationship between DNA, genes and chromosome. Students will define and explain the significance of the diploid number for all living things and compare that to the haploid number (using the human 46/23 as an example). Discuss and give examples of chromosomal nondisjunction disorders.

Framework: Sunshine State Standards Grade Level Expectations

Florida Department of Education 1

Subject: Mathematics

Grade: K-2

Category: Number Sense

Topic: Concepts, and Operations

Level 1. Standard 1: *The student understands the different ways numbers are represented and used in the real world.*

Level 2: Benchmarks by Grade Cluster

Benchmark 1.1: The student associates verbal names, written word names, and standard numerals with the whole numbers less than 1000.

Level 3: Grade- Specific Expectations

1.1.1. In Kindergarten, student counts up to 10 or more objects using verbal names and one-to-one correspondence....

1.1.2 In First Grade, student compares and orders whole numbers to 100 or more using concrete materials, drawings, number lines, and symbols (<, =, >)....

1.1.3 In Second Grade, student represents real-world applications of whole numbers, to 1000 or more, using concrete materials, drawings, and symbols.
